

The AIM Chronicles

December, 2009

AIM Steel, Inc. Goes International

AIM steel plans to build its new state of the art office headquarters during 2010. The facility will feature training com-

pound for erection, and rigging.

We now have a total of ninety committed certified welders and erectors that are willing to work throughout the country

and travel overseas. With the combined efforts of management and field teams, AIM Steel, Inc. will surely become one of the top steel companies in the country.

Job Site Safety

Steel erection can be dangerous business. The close proximity of workers to heavy equipment, overhead lifts and potentially unstable structures, combined with working at heights pose significant risks to workers that must be managed by the project

About 28 deaths and 1,800 lost-workday injuries occur each year among iron workers. OSHA suggests that full compliance with the proposed requirements and existing requirements must be complied with.

Aim steel has a Zero tolerance policy . All employees must comply with 100% tie off
